

# Current Directions in Mathematics and Statistics Scholarship

John Kolassa

November 28, 2021

## Interdisciplinary, from NSF DMS:

- ① NSF-Simons Collaboration on a National Institute for Theory and Mathematics in Biology

## Interdisciplinary, from NSF DMS:

- 1 NSF-Simons Collaboration on a National Institute for Theory and Mathematics in Biology
- 2 NSF-Simons Collaboration on Complex Biological systems (suggested for MPS)

## Interdisciplinary, from NSF DMS:

- 1 NSF-Simons Collaboration on a National Institute for Theory and Mathematics in Biology
- 2 NSF-Simons Collaboration on Complex Biological systems (suggested for MPS)
  - 1 “[P]rimarily focus on advances in theory and mathematics that are motivated by and applicable to the analysis of complex biological systems.”

## Interdisciplinary, from NSF DMS:

- ① NSF-Simons Collaboration on a National Institute for Theory and Mathematics in Biology
- ② NSF-Simons Collaboration on Complex Biological systems (suggested for MPS)
  - ① “[P]rimarily focus on advances in theory and mathematics that are motivated by and applicable to the analysis of complex biological systems.”
- ③ “Harnessing the Data Revolution : Transdisciplinary Research in Principles of Data Science Phase II (TRIPODS)”

## Interdisciplinary, from NSF DMS:

- 1 NSF-Simons Collaboration on a National Institute for Theory and Mathematics in Biology
- 2 NSF-Simons Collaboration on Complex Biological systems (suggested for MPS)
  - 1 “[P]rimarily focus on advances in theory and mathematics that are motivated by and applicable to the analysis of complex biological systems.”
- 3 “Harnessing the Data Revolution : Transdisciplinary Research in Principles of Data Science Phase II (TRIPODS)”
  - 1 “[A]ims to bring together the electrical engineering, mathematics, statistics, and theoretical computer science communities to develop the theoretical foundations of data science through integrated research and training activities. ”

## Interdisciplinary, from NSF DMS:

- 4 Families want
  - 1 jobs.
  - 2 Commit tuition.
- 5 Donors want all of these.

## My Experience with Academic leadership

# Directed graduate program

- 1 Roughly 40 PhD students, 150 MS students

# Directed graduate program

- 1 Roughly 40 PhD students, 150 MS students
- 2 Chaired PhD admissions committee

# Directed graduate program

- 1 Roughly 40 PhD students, 150 MS students
- 2 Chaired PhD admissions committee
- 3 Handled MS admissions mostly by myself

# Directed graduate program

- 1 Roughly 40 PhD students, 150 MS students
- 2 Chaired PhD admissions committee
- 3 Handled MS admissions mostly by myself
- 4 Budgeted PhD student support

# Directed graduate program

- 1 Roughly 40 PhD students, 150 MS students
- 2 Chaired PhD admissions committee
- 3 Handled MS admissions mostly by myself
- 4 Budgeted PhD student support
  - 1 Negotiated with School of Arts and Sciences for TA lines

# Directed graduate program

- 1 Roughly 40 PhD students, 150 MS students
- 2 Chaired PhD admissions committee
- 3 Handled MS admissions mostly by myself
- 4 Budgeted PhD student support
  - 1 Negotiated with School of Arts and Sciences for TA lines
  - 2 Coordinated RA lines with my colleagues

# Directed graduate program

- 1 Roughly 40 PhD students, 150 MS students
- 2 Chaired PhD admissions committee
- 3 Handled MS admissions mostly by myself
- 4 Budgeted PhD student support
  - 1 Negotiated with School of Arts and Sciences for TA lines
  - 2 Coordinated RA lines with my colleagues
  - 3 Worked with colleagues to assemble financial support from miscellaneous sources.

# Various roles supervising:

- 1 teaching assistants

## Various roles supervising:

- 1 teaching assistants
- 2 my own supported PhD students

## Various roles supervising:

- 1 teaching assistants
- 2 my own supported PhD students
- 3 part-time lecturers

## Various roles supervising:

- 1 teaching assistants
- 2 my own supported PhD students
- 3 part-time lecturers
  - 1 Included a leading role in course assignments.

## Various roles supervising:

- 1 teaching assistants
- 2 my own supported PhD students
- 3 part-time lecturers
  - 1 Included a leading role in course assignments.
- 4 administrative staff who supported the program.

# Other university leadership roles

- 1 Secretary to the faculty of the School of Arts and Sciences

## Other university leadership roles

- 1 Secretary to the faculty of the School of Arts and Sciences
- 2 Service on various graduate school policy-making boards

## Other university leadership roles

- 1 Secretary to the faculty of the School of Arts and Sciences
- 2 Service on various graduate school policy-making boards
- 3 Service on the School of Arts and Sciences core curriculum committee.

# Leadership outside the university

- 1 Service on various journal editorial boards

# Leadership outside the university

- 1 Service on various journal editorial boards
- 2 Service on conference organizing committees

# Leadership outside the university

- 1 Service on various journal editorial boards
- 2 Service on conference organizing committees
- 3 Service on the ASA SPAIG committee

## What I've learned:

- 1 Faculty relationships last for a long time.

## What I've learned:

- ① Faculty relationships last for a long time.
  - ① Broken relationships can be very disruptive.

# What I've learned:

- ① Faculty relationships last for a long time.
  - ① Broken relationships can be very disruptive.
  - ② This disruption is more severe in a smaller department.

## What I've learned:

- 1 Faculty relationships last for a long time.
  - 1 Broken relationships can be very disruptive.
  - 2 This disruption is more severe in a smaller department.
- 2 Collaborators are more productive when they are convinced that the plan is right.

## What I've learned:

- ① Faculty relationships last for a long time.
  - ① Broken relationships can be very disruptive.
  - ② This disruption is more severe in a smaller department.
- ② Collaborators are more productive when they are convinced that the plan is right.
- ③ Getting discussions that need to happen out in the open takes work.

# What I've learned:

- ① Faculty relationships last for a long time.
  - ① Broken relationships can be very disruptive.
  - ② This disruption is more severe in a smaller department.
- ② Collaborators are more productive when they are convinced that the plan is right.
- ③ Getting discussions that need to happen out in the open takes work.
- ④ In the short run, departmental leadership doesn't have a lot of control

## What I've learned:

- 1 Faculty relationships last for a long time.
  - 1 Broken relationships can be very disruptive.
  - 2 This disruption is more severe in a smaller department.
- 2 Collaborators are more productive when they are convinced that the plan is right.
- 3 Getting discussions that need to happen out in the open takes work.
- 4 In the short run, departmental leadership doesn't have a lot of control
  - 1 over the talents at its direction,

## What I've learned:

- 1 Faculty relationships last for a long time.
  - 1 Broken relationships can be very disruptive.
  - 2 This disruption is more severe in a smaller department.
- 2 Collaborators are more productive when they are convinced that the plan is right.
- 3 Getting discussions that need to happen out in the open takes work.
- 4 In the short run, departmental leadership doesn't have a lot of control
  - 1 over the talents at its direction,
  - 2 or over the incentives under its control.

## What I've learned:

- 1 Faculty relationships last for a long time.
  - 1 Broken relationships can be very disruptive.
  - 2 This disruption is more severe in a smaller department.
- 2 Collaborators are more productive when they are convinced that the plan is right.
- 3 Getting discussions that need to happen out in the open takes work.
- 4 In the short run, departmental leadership doesn't have a lot of control
  - 1 over the talents at its direction,
  - 2 or over the incentives under its control.
  - 3 This makes the correct alignment of tasks with people critical.

## What I've learned:

- 1 Faculty relationships last for a long time.
  - 1 Broken relationships can be very disruptive.
  - 2 This disruption is more severe in a smaller department.
- 2 Collaborators are more productive when they are convinced that the plan is right.
- 3 Getting discussions that need to happen out in the open takes work.
- 4 In the short run, departmental leadership doesn't have a lot of control
  - 1 over the talents at its direction,
  - 2 or over the incentives under its control.
  - 3 This makes the correct alignment of tasks with people critical.
  - 4 Opportunities available to a department are constrained by the enthusiasm and talents of those involved.

## Directions for MST

# The Mathematics and Statistics department is very small.

- 1 I count 17 regular faculty, 5 teaching faculty, 4 lecturers.

## The Mathematics and Statistics department is very small.

- 1 I count 17 regular faculty, 5 teaching faculty, 4 lecturers.
- 2 The department would be small even for a department exclusively responsible for statistics.

# The Mathematics and Statistics department is very small.

- 1 I count 17 regular faculty, 5 teaching faculty, 4 lecturers.
- 2 The department would be small even for a department exclusively responsible for statistics.
- 3 Relative to its teaching responsibilities, the department is tiny.

# The Mathematics and Statistics department is very small.

- 1 I count 17 regular faculty, 5 teaching faculty, 4 lecturers.
- 2 The department would be small even for a department exclusively responsible for statistics.
- 3 Relative to its teaching responsibilities, the department is tiny.
  - 1 To some degree, a small full time faculty can be augmented by faculty hired per course.

# The Mathematics and Statistics department is very small.

- 1 I count 17 regular faculty, 5 teaching faculty, 4 lecturers.
- 2 The department would be small even for a department exclusively responsible for statistics.
- 3 Relative to its teaching responsibilities, the department is tiny.
  - 1 To some degree, a small full time faculty can be augmented by faculty hired per course.
  - 2 Part-time faculty require much effort to recruit and to supervise.

## The Mathematics and Statistics department is very small.

- 1 I count 17 regular faculty, 5 teaching faculty, 4 lecturers.
- 2 The department would be small even for a department exclusively responsible for statistics.
- 3 Relative to its teaching responsibilities, the department is tiny.
  - 1 To some degree, a small full time faculty can be augmented by faculty hired per course.
  - 2 Part-time faculty require much effort to recruit and to supervise.
  - 3 Quality control is problematic.

# The Mathematics and Statistics department is very small.

- 1 I count 17 regular faculty, 5 teaching faculty, 4 lecturers.
- 2 The department would be small even for a department exclusively responsible for statistics.
- 3 Relative to its teaching responsibilities, the department is tiny.
  - 1 To some degree, a small full time faculty can be augmented by faculty hired per course.
  - 2 Part-time faculty require much effort to recruit and to supervise.
  - 3 Quality control is problematic.
- 4 Research mentoring of early-career faculty is more difficult.

## The Mathematics and Statistics department is very small.

- 1 I count 17 regular faculty, 5 teaching faculty, 4 lecturers.
- 2 The department would be small even for a department exclusively responsible for statistics.
- 3 Relative to its teaching responsibilities, the department is tiny.
  - 1 To some degree, a small full time faculty can be augmented by faculty hired per course.
  - 2 Part-time faculty require much effort to recruit and to supervise.
  - 3 Quality control is problematic.
- 4 Research mentoring of early-career faculty is more difficult.
  - 1 Assistant professors with a research agenda not overlapping with more senior faculty have a harder time getting subject matter-specific advice

# The Mathematics and Statistics department is very small.

- 1 I count 17 regular faculty, 5 teaching faculty, 4 lecturers.
- 2 The department would be small even for a department exclusively responsible for statistics.
- 3 Relative to its teaching responsibilities, the department is tiny.

  - 2 This disadvantage is less problematic with easier communication, but still exists.
- 5 The administrative burden on faculty is heavy.
  - 1 Average burden per student goes down as program size increases.
  - 2 I don't recommend trying to push the marginal burden to zero, but average burden still falls.

This particular small size is remarkable.

- 1 Mathematics is central to STEM education.

## This particular small size is remarkable.

- ① Mathematics is central to STEM education.
- ② Course offerings beyond the service courses are small in number.

## This particular small size is remarkable.

- 1 Mathematics is central to STEM education.
- 2 Course offerings beyond the service courses are small in number.
- 3 The department web page correctly describes math as a universal degree

# This particular small size is remarkable.

- ① Mathematics is central to STEM education.
- ② Course offerings beyond the service courses are small in number.
- ③ The department web page correctly describes math as a universal degree
  - ① This ought to lead to demand for more courses than are currently offered.

## This particular small size is remarkable.

- 1 Mathematics is central to STEM education.
- 2 Course offerings beyond the service courses are small in number.
- 3 The department web page correctly describes math as a universal degree
  - 1 This ought to lead to demand for more courses than are currently offered.
- 4 Optimal size?
